INTRODUCTION

Traditional storage techniques remain one of the pillars for attaining food security in rural Tanzania but unsupportive because of the attitudes of technocrats towards the local technologies. This contributed to food insecurity in marginalized societies where modern storage facilities are expensive and inaccessible. This study assesses the contribution of traditional storage practices to food security

APPROACH

The study employed face to face interview, photo narratives, documentary review and Focus Group Discussions. Content Analysis was employed for analyzing qualitative data being gathered from the respondents.

TRADITIONAL VS MODERNITY

- Affordability
- Accessibility
- Safety
- Sustainability

CONCLUSION

The study concludes that indigenous practices have advantages over outside knowledge because of being sustainable and economical. Therefore, it is necessary for the Local Government Authorities to support traditional food storage practices in marginalized communities as a means of enhancing agricultural productivity, attaining food security and ultimately improving peoples' well being in rural areas
